

SchoolSphere – Inter-school Profiles & Career Readiness for Indian Students

Stage: Pre-MVP · Focus: India · Founders: Arpit Panwar, Falak Ameer

1. Problem

Indian school students (13–18) sit at the centre of a broken system:

- **Their achievements are scattered across certificates, WhatsApp groups, and school files – no living, structured profile that travels with them.**
- **Career choices are driven by marks, peer pressure, and coaching narratives, not interests, aptitude, or real-world exposure.**
- **Parents are anxious and willing to pay, but options are fragmented – one-off tests, generic counsellors, and exam-focused apps.**
- **Schools are under pressure (NEP, parent expectations) to offer career guidance and holistic development, but lack tools, time, and capacity.**

Result: students are over-coached, under-guided, and largely unaware of the full opportunity landscape.

2. Our Solution – SchoolSphere

SchoolSphere is an inter-school student profile and career readiness platform for classes 8–12.

We're building a living portfolio + opportunity engine + guidance layer, not just another test or counselling app.

Core pillars:

- **Student Profiles: Structured, ongoing profiles capturing academics, entrance exams, projects, activities, achievements, and goals – with multimedia proof.**
- **Opportunities Feed: Curated scholarships, competitions, programs, workshops, and events, filtered by class, interests, exams (JEE/NEET/CUET/CLAT/NDA, etc.) and location.**
- **Mentorship & Community: Safe access to alumni, college students, and young professionals from similar backgrounds; moderated peer groups across schools.**
- **Parent & School Dashboards: A single view of a student's strengths, interests, milestones, and recommended next steps – replacing ad-hoc WhatsApp + PTM chaos.**
- **India-first Lens: Exam mapping, scholarship hub (NTSE, state schemes, NGO/corporate awards), regional language support, and culturally relevant success stories.**

3. Market & Business Model

- **Target Segment (initial):**
Urban and Tier-2 private schools and coaching centres, classes 8–12; “career-anxious but opportunity-blind” students and their parents.
- **Model (B2B2C):**
 - **Schools & Coaching (B2B): Annual per-student / per-school fee for profiles, dashboards, and assessments.**
 - **Parents & Students (B2C): Affordable subscriptions (₹99–₹499/month) for deeper assessments, structured mentoring, and premium opportunity access.**

- **Institutions & Brands:** Colleges, coaching institutes, and education brands pay for targeted outreach, premium listings, and campaigns to relevant student cohorts.

Long term, SchoolSphere aims to become the default student profile & readiness layer on which counsellors, coaching, colleges, and scholarship providers plug in.

4. Stage & Roadmap

Current stage: Pre-MVP / Validation

Immediate 6–12 month plan:

- 20–30 qualitative interviews + focus groups with students, parents, teachers, and coaching owners.
- No-code MVP (web-first) with:
 - Student profile builder
 - Opportunity feed
 - Basic parent/school view
- Run pilots with 2–3 schools/coaching partners (50–200 students) to test engagement, retention, and willingness to pay.
- Use pilot data to refine wedge (e.g., exam-focused cohorts, scholarship-heavy use cases, or mentor-led cohorts).

5. Founding Team

Arpit Panwar – Co-founder, Product & Strategy

MBA with focus on data/AI and marketing; currently in a strategy role at a leading global technology services company. Experience designing workflows, working with multiple business stakeholders, and building youth/education-focused concepts. Leads product vision, strategy, and stakeholder management (schools, parents, partners).

Falak Ameer – Co-founder, Sales & Partnerships

Cluster Sales Manager at a leading Indian financial services & health insurance group. Manages multiple banks, builds deep local relationships, and drives on-ground revenue through channel and partner sales. Leads school/parent acquisition, partnerships, and GTM execution.

Together, we bring strategy + field sales + execution – exactly what’s required to sell into schools, win parent trust, and run disciplined pilots.

6. What We’re Looking For (Right Now)

We are not raising funds at this stage. We’re looking for:

- Blunt feedback on the wedge, product scope, and GTM from people who’ve seen K-12/ed tech up close.
- Guidance on what proof points (pilots, metrics, revenue) we should aim for before this becomes a credible seed-stage bet.
- Potential support from incubators/accelerators for validation, school access, and product/GTM mentorship.

If this resonates, we’d value a 20–25 minute conversation to walk you through the idea and have you tear it apart before we overbuild.
